Section 1. „Python App in Docker Container"

Example Python Code is available at https://github.com/python-in-containers/simple-flask
Commands shown in this Lecture require a working Docker environment installed on
Development Host. Docker installation Lectures are located in Section 2 **Docker Deep Dive**.
Commands used:

```
$ git clone https://github.com/python-in-containers/simple-flask

$ cd simple-flask

$ atom .

$ docker build -t pythonincontainers/simple-flask:v1.0 .

$ docker run --rm -it -p 5001:5000 pythonincontainers/simple-
flask:v1.0
```

Open Web browser with address **localhost:5001**. Substitute **localhost** with Docker Machine
IP Address, if necessary.
Press <Ctrl-C> to stop Flask App.
